

SWELL SPOTS™

MANUFACTURED BY SOLARIS

SWELL SPOTS - LITTLE HELPERS, BIG RELIEF

Swell Spots are professionally designed treatment pads that tuck into garments or under bandaging to address particularly troublesome areas of edema, fill contours, or diffuse pressure points and break up fibrosis.

- 1** Foam chips in Swell Spots create localized tissue pressure differentials to stimulate interstitial fluid movement, prevent stagnation, and soften indurated tissue.
- 2** Foam chips nestle into tissue to create localized tissue stretch and pressure differential.
- 3** Tissue stretch opens up gap junctions, drawing excess interstitial fluids and waste products into the lymphatic system.

The Swell Spots Story

Swell Spots began as mini-solutions to the big challenge of lymphedema. News spread, and hand therapists and other professionals now use them to meet a wide range of rehabilitation needs, such as problematic areas of swelling, tissue fibrosis, and contouring over and around bony prominences. Wherever there is a pocket of swelling there is a Swell Spot to fit the job.
