

Solaris Product Guide: Hands and Feet

Caresia Glove and Gauntlet Bandage Liners

Caresia Gloves and Gauntlets are excellent for those patients who have swelling and tissue induration in the hands. These garments feature individual finger spacers to provide circumferential compression. Many therapists recommend these units for their post-surgical hand patients and patients with arthritis or lymphedema. Can be paired with Caresia Arm garments.

Caresia and Tribute Toes-to-Ankle, ReadyWrap Foot

Tribute Glove and Extended Glove

Solaris has been told by therapists and clients that this is the premier lymphedema/edema glove on the market. Solaris' unique digit pockets cradle the fingers in comfort, while addressing swelling and fibrosis throughout the hand. These gloves are useful for treatment of hand swelling, arthritis, fibromyalgia and tendonitis in the hand as well as lymphedema. Also available in extended glove style (right). Can be paired with custom Tribute arm garments.

The Solaris Caresia Foot Bandage Liner is comfortable and easy to don. The foam chips on all surfaces address induration and lymphostasis. Lymph flow is stimulated and the tissue is softened, and swelling is contained. May be bandaged over with short-stretch bandaging if more compression is needed.

The Solaris Tribute Foot and Ankle unit is intended for clients with edema and/or tissue fibrosis at the foot and/or ankle region. Product provides a defined foot sole and ankle definition. Standard heel assist loop is provided to aid donning.

ReadyWrap Foot units are made of low-stretch, low profile Breathoprene which fits comfortably into most shoes, is moisture wicking and thermal releasing and provides adjustable compression with its Velcro closure system.
